

Landerhaven II

A Cleveland area office building, which had been in various stages of construction over the past couple years, now has the interior, exterior and landscaping in place and is open for business.

Sidley Precast provided the architectural precast on the Landerhaven Office Building in Mayfield Heights, Ohio.

The Landerhaven Office Building is presently open for business with the final touches completed Spring of 2002.

This project combines radius and concaved precast panels with granite insets and bullnose accents. The building features over 18,000 square feet of Precast Concrete components. The office building is located in the developing Landerhaven Office Park.

Landerhaven II Office Building during the precast erection phase of construction.
